Technical specifications

Material	Fiberglass
Reflective	2 films, class I
Color	Yellow
Colour (Reflective)	Red
Bottom end	Pointed
Installation	On the verge, one every 50 m

Description

The ATZ D13010 is a yellow fibreglass blade, 130 cm long, 10 cm wide and only 3 mm thick. It goes on the verge and shows where the carriageway ends when the markings can no longer be seen: at night, in fog or when snow covers the road.

The reflective film

Near the top it carries two red Class I reflective films. By day you see the yellow blade, and at night the film sends the headlights back to the driver.

The same post as the ATO 6301, in yellow

Its size, weight and films are the same as those of the ATO 6301, the white guide post. Only the colour of the blade differs.

Technical data

- yellow fibreglass blade, 1300 × 100 × 3 mm;
- weight 0.8 kg;

- 2 red Class I reflective films near the top;
- pointed bottom end.

How many posts you need

The posts go 50 m apart along the edge of the carriageway. One kilometre of road takes 20 posts on one side, or 40 if you mark both edges. At 0.8 kg each, those 40 posts weigh 32 kg.

Where it is used

- unlit county and local roads;
- bends and embankments where the edge of the road is hard to see;
- access roads to farms, quarries or industrial sites;
- roads where snow covers the markings in winter.

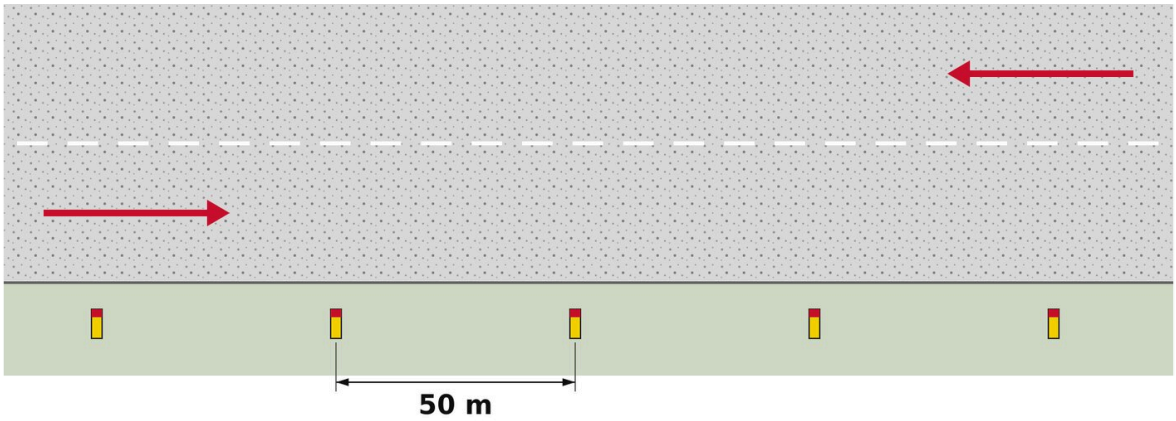
Cum se folosește
How it is used

ATZ D13010

Pe acostament, câte un stâlp la 50 m

stâlpii, mărit



On the verge, one post every 50 m · posts enlarged

Pe un kilometru de drum, pe o singură parte, înseamnă 20 de stâlpi.
One kilometre of road, on one side, takes 20 posts.

Galbenul se vede ziua, iar folia roșie prinde lumina farurilor noaptea.
The yellow shows by day and the red film catches the headlights at night.
