Technical specifications

Material	HDPE
Color	Green
Fixing	Fixing kit for a metal barrier, included
Use	In a row, on the barrier between the carriageways

Description

At night, on a road where the two directions are separated only by a barrier, the headlights of oncoming cars shine straight into the windscreen. A row of anti-glare beacons on the barrier cuts that light, and the driver sees the road again instead of two white dots.

This version comes with the mounting system for metal barriers, so the box contains everything needed to fit it to a metal crash barrier.

Technical data

- green HDPE with lengthwise ribs;
- 90 cm tall, 22 cm wide, 5 cm thick;
- 2.7 kg each;
- mounting system for metal barriers included.

Where it is fitted

On the metal barrier in the middle of motorways and expressways, on four-lane main roads and on bridges where the directions are separated by a metal barrier. The beacons go one after another, evenly spaced, along the whole section.

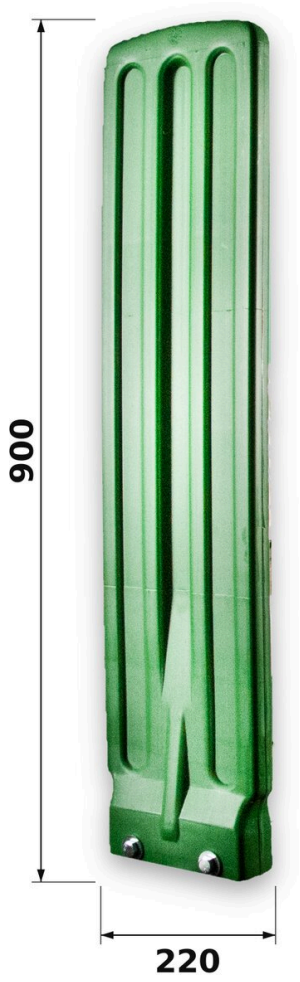

Without mounting

If the brackets are already on the barrier or you are fitting to another type of barrier, there is the ATD A900, the same beacon without the mounting system.
