Technical specifications

Material	HDPE
Color	Green
Fixing	No fixing kit; it bolts on through the bottom
Use	In a row, on the barrier between the carriageways

Description

Anti-glare beacons are fitted in a row on the barrier that separates the two directions of traffic. Their job is to stop the headlights of oncoming cars before they reach the driver's eyes, especially at night on motorways, expressways and dual carriageways.

Size and material

Each blade is 90 cm tall, 22 cm wide and 5 cm thick, and weighs 2.7 kg. It is made of green HDPE with ribs running its full length, and it bolts to the barrier at the bottom.

No mounting system

This version comes without fixings. It makes sense when:

- you are replacing broken blades on a barrier that already has the brackets fitted;
- the barrier is not a metal one and you use the fixings that suit it;
- you already have the fixings from an earlier order.

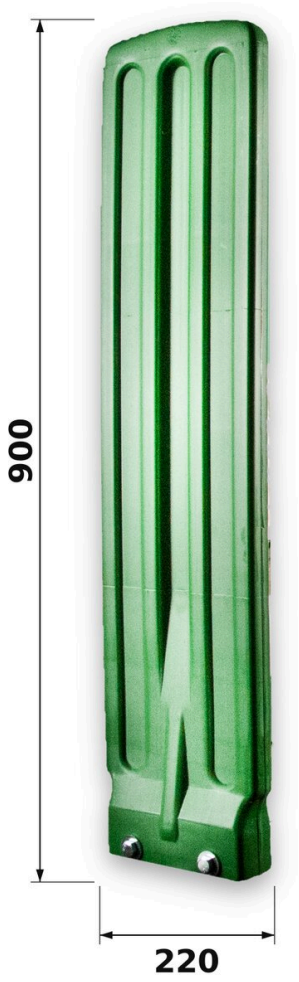

With mounting included

If you are fitting to a metal barrier and have no fixings, take the ATD A901, the same beacon supplied with the mounting system for metal barriers.

Cum se folosește
How it is used

ATD A900

Lamele antiorbire montate în șir pe parapetul metalic
Anti-glare blades fitted in a row on a metal guardrail

ATD A900 este doar lamela: se prinde prin partea de jos, cu șuruburi, pe suporturi deja montate.
ATD A900 is the blade only: it bolts on through the bottom, onto supports already fitted.

Cu sistemul de prindere pentru parapet metalic inclus, aceeași lamelă este ATD A901.
With the fixing kit for a metal barrier included, the same blade is ATD A901.
