Technical specifications

Material	PPC, PVC
Reflective	2 reflective films
Color	White

Description

Unlike ballastable barriers, this one is not filled with water or sand. The weight is already built in: it weighs 20 kg thanks to its hard plastic base. You unload it from the van and it is ready to use, with no hose and no sandbags to carry.

Construction

- white PPC and PVC body with openings in the middle;
- black hard plastic base;
- 100 cm long, 40 cm wide, 60 cm high;
- 2 reflective films in the red and white chequered band along the top.

Storage

The barriers stack one on top of another, so a whole pile takes little room in the store or the lorry.

Where it is used

To mark off a work area on the road or the pavement, to close an entrance and to separate a pedestrian walkway alongside a building site.

When to choose it

When the work moves often and there is no time to fill and drain barriers, in winter when water in barriers can freeze, or where there is no water supply at hand.
