Technical specifications

Material	PVC, PPC
Color	Red
Reflective	4 reflective sheets
Installation	4 Dowels, 4 Screws

Description

A panel 150 cm long and 100 cm high, on two black feet, that you set around a hole, an open manhole or an area where people are working. The frame is PVC and PPC, 5 cm thick and 12.5 kg, so one person can carry it.

Top and bottom there is a band of red and white stripes. In total there are 4 reflective films, which catch the headlights after dark.

Several fences in a line

A black clip on the side attaches it to the next fence. That way a few panels become a continuous enclosure of whatever length you need. At the end of the day you take them down and stack them flat, one on top of another, on a pallet or in a trailer.

Lamps and signs

The fence has 2 threaded sockets that take warning lamps or small plastic signs. If you want a fence that already carries signs, see the fences with a 100 × 50 cm sign panel.

Fixing

It usually stands freely on its feet. Where it must stay put, the product sheet gives fixing to the ground with 4 anchors and 4 bolts.

Other colours

The same fence comes in white, yellow and blue (RAL 5012).
