Description

The 6V, 7-9Ah battery powers the battery-operated flashing lamps: the V8-Y, V8-R and V8-Y2. It is a 4R25 zinc-carbon dry battery with two metal spring terminals on top, covered by black caps. It is not rechargeable: when it runs down, you replace it.

How it is used

It comes ready to use, with no liquids to add. It works in any position without leaking, including on moving vehicles.

How long it lasts

In a V8-Y or V8-R lamp it runs for about 360 hours, calculated at 7Ah. The exact time also depends on the light mode, flashing or steady. The V8-Y2, with two batteries, runs for about 710 hours.

No mercury or cadmium

The label shows 0% mercury and 0% cadmium. A used battery must not be left in the environment: hand it to a specialist waste company, as current waste rules require.

Technical data

- type 4R25, zinc-carbon;
- 6V, 7-9Ah;
- non-rechargeable;
- 0.46 kg;
- 6.5 × 6.5 cm base, 9.8 cm high without the springs.

7-9Ah or 50Ah

For short jobs, the 7-9Ah battery is enough. For long jobs, the 50Ah battery, the V8-B650, has 5-7 times the capacity, lasts about 2800 hours and needs changing far less often. If you want no batteries at all, see the V8-YS solar lamp.
