Technical specifications

Type	Weight base for a cone
Material	PVC
Colour	Black
Shape	Square plate with a round opening in the middle
Installation	Slips over the cone and sits on its base

Description

Light cones of 1-3 kg can blow over in the wind or in the draught of a passing lorry. The ATO 3951 adds 4 kg: it is a black PVC plate with a round opening in the middle that slips over the cone and sits on its base.

When you need it

When you already have cones without a heavy base and want to use them on an open road, at works left overnight or in a car park exposed to the wind.

Technical data

- PVC, black;
- 38 × 38 × 5 cm;
- 4 kg;
- round opening in the middle.

How much it adds

The base weighs 4 kg, more than our standard-base 52, 75 and 90 cm cones weigh on their own, from 0.9 kg to 3.2 kg.

The alternative

If you are buying new cones for windy spots, you can go straight for a weighted-base model, for example the V6-50AR2, V6-70AR2 or V6-90AR2.

ATO 3951

Baza se trage peste con și se așază pe baza lui
The base slips over the cone and sits on its base

Adaugă 4 kg conurilor ușoare, ca să nu le răstoarne vântul sau curentul de la camioane.
It adds 4 kg to light cones, so wind or passing lorries do not knock them over.
