Technical specifications

Type	Reflective road stud, screw-fixed
Material	PPC
Colour	Yellow
Reflectors	8 hexagonal cat's eyes, red on the sides
Installation	2 concrete screws 7.5 × 80 mm, included
Orientation	Long side across the direction of travel

Description

The ATZ 8002 is shaped like a small lane separator: an elongated yellow PPC body, 21 cm long, with sloping sides and 8 reflectors, red on the sides. Laid one after another, the studs form a line that is visible by day and night and that drivers feel if they cross it.

Technical data

- dimensions: 21 × 9.7 cm;
- height: 2.8 cm;
- material: PPC, yellow;
- reflectors: 8 cat's eyes;
- weight: 170 g.

Installation

It is fixed with 2 concrete screws of 7.5 × 80 mm, included, through the two holes on top. Lay the stud with its long side across the direction of travel, so the reflectors on its sides face the traffic.

Where it is used

Between the lanes of a car park ramp, to separate parking bays from the driving aisle, along the edge of a cycle lane or around a loading area. For a line, keep an even gap between studs, for example 1 m.

Round version

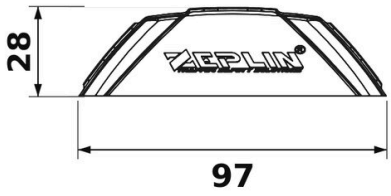

For corners and roundabouts, where cars come from several directions, the round ATZ 8001 stud has reflectors all the way round.
