Technical specifications

Material	PVC, PPC
Color	Red
Reflective	4 reflective sheets

Description

It has the same size as the red modular barrier, 150 × 100 cm, but a different look and weighs 12.5 kg. The red frame has diagonal ribs, the reflective bands top and bottom are red and white chequers, and the black feet are curved and widen towards the ground.

Joining

One side has two clips that attach it to the next fence, so several fences link up in a line.

Lamps and signs

The 2 threaded sockets take a warning lamp or a small plastic sign. Reflective film only helps at night when headlights catch it; a lamp signals the rest of the time.

Material

The frame is PVC and PPC, 5 cm thick. The chequered bands run along the top and bottom of the frame, and the feet are black, separate from the frame.

When to choose it

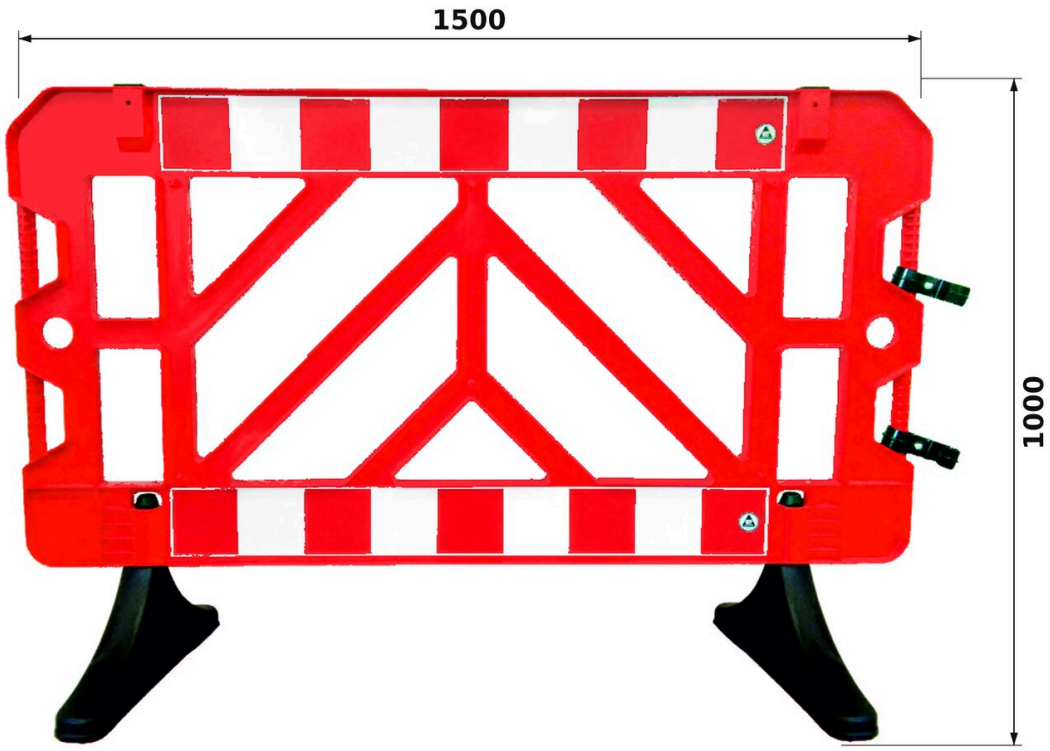

For pavement works, potholes and trenches in town, or closing off a work area on a road. If you are mixing fences, keep the same model along the whole line so the clips match.
