Technical specifications

Material	PPC
Color	Red
Height	48.3 cm
Size (Base)	28 × 28 cm
Base Shape	Octagon
Bands	2 white bands with red dots
Top	Ø35 mm thread
Chain Fixing	At the top, with the ATZ 101A and ATZ 330A hooks (not included)

Description

The marker cone is the simple red-and-white cone you move from place to place as often as needed. It is 48.3 cm high, has 2 white bands with red dots and a 28 × 28 cm octagonal base, and weighs 0.95 kg.

What it is for

Marking out areas where work is done on the road, where access is prohibited, in car parks or on building sites. It is also handy in yards, at car workshops or for marking a temporary route.

Economy

It belongs to the economy series: low price, low weight, matt colours. It is the right choice when you need many pieces for occasional use.

Technical data

- 48.3 cm high;
- 28 × 28 cm octagonal base;
- 0.95 kg;
- red with 2 white bands.

More stable

The same marker cone on a 39 cm, 2.4 kg black weighted base is the V6-50EA. For work on roads with traffic, choose a cone with honeycomb reflective bands, for example the V6-50R2E.

Top of the cone

The cone has a Ø35 mm thread on top, with no loop. A plastic sign, a lamp or the ATZ 101A hook screws straight into it, with no adapter.

Chain and stacking

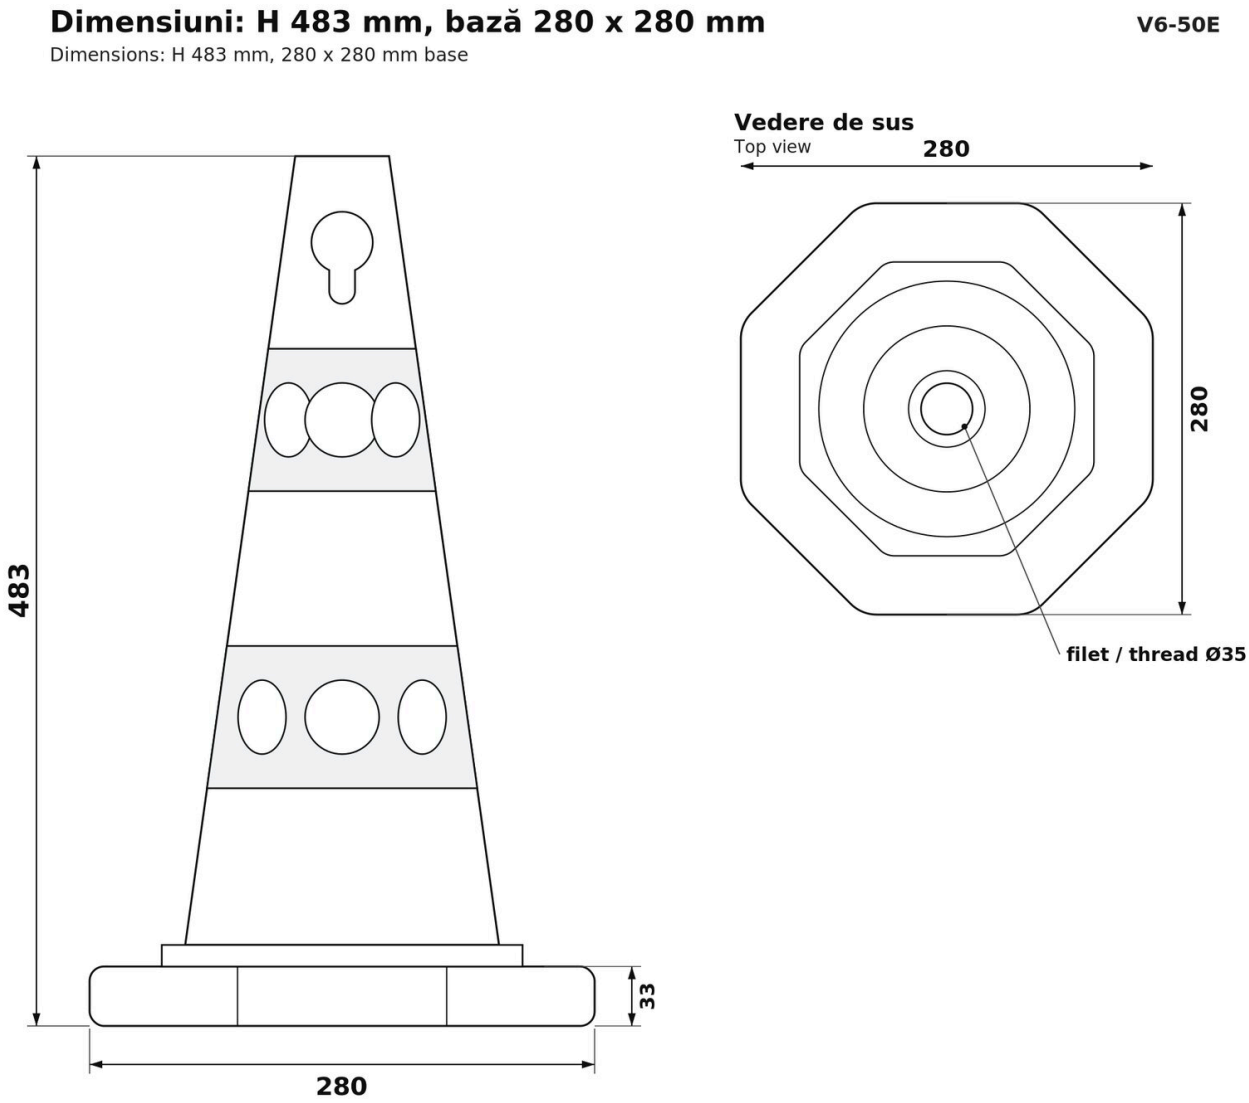

The plastic chain fastens at the top: screw the ATZ 101A hook into the thread, then fasten the chain to its ring with the ATZ 330A hook. That is how you link the cones together. The hooks and the chain are ordered separately. The cones stack inside each other, and the base has feet and channels that let the water drain.

What the roadworks rules require (Order 1112/411/2000)

SR 1848-1:2024 provides the traffic cone (V6) to protect freshly applied markings, to mark off small works and to sign police crews at accident scenes. In a work-zone signing layout, cones belong to the signing that marks the works, together with barrier boards and markers, installed after the advance signing. The methodological rules approved by Order MI/MT no. 1112/411/2000 require temporary signing to be retroreflective at night wherever the existing signing is. Compared with the 2011 edition, SR 1848-1:2024 specifies orange instead of red for the V6 cone. This marker cone is red, so for roadworks signing choose an orange traffic cone, such as the V6-50R2 or V6-50AR2.

The contractor installs the signing to the layout approved by the road authority with the traffic police's agreement, maintains and completes it for the whole job and removes it at the end; accidents caused by incomplete or missing temporary signing are entirely the contractor's responsibility.
