Technical specifications

Type	LED module
Light colour	Yellow
Diameter	D-200 mm
Position in the signal head	middle
Compatible with	V11-20
Fault indication	code on the control unit display

Description

The yellow light sits in the middle of the V11 traffic light and signals the change between green and red. It is also the light that flashes when the traffic light is switched to flashing yellow. The V11-D200-Y is the yellow Ø200 mm LED module, sold separately as a spare part for when the original light fails or is broken. The module has a black body, a clear lens and LEDs across the whole surface; the yellow only shows when it is on.

Compatibility

It fits in the head of the V11 mobile traffic light, in the V11-20 set, without countdown. On the V11-21 the middle light shows digits, and we have no separate module for it.

How you know it has failed

The control unit checks the lamps all the time and, when the yellow light fails, shows its code. That way you know exactly which module to change.

Why a separate part

On site, a traffic light can be knocked or a single light can fail. With the spare part, you repair the light on the spot and put it back in service without buying a new set.

Technical data

- Ø200 mm diameter;
- 20 × 20 × 10 cm;
- 1 kg.

Other parts

The red light is the V11-D200-R and the green one the V11-D200-G. The control unit of the traffic light is the V11-CONTROL.
