Technical specifications

Type	LED module
Light colour	Red
Diameter	D-200 mm
Position in the signal head	top
Compatible with	V11-20
Fault indication	code on the control unit display; the light switches to flashing yellow

Description

The red light is the most important one in a roadworks signal: it stops one direction so the other can pass. If it fails, the light can no longer be used safely. The V11-D200-R is the red Ø200 mm LED light, a spare part for the V11 mobile traffic light.

What it replaces

The red light in the head of a V11 traffic light, in the V11-20 set. You replace only the faulty light, not the whole traffic light.

How you know it has failed

The control unit checks the lamps all the time. When the red light fails, the display shows its code and the traffic light switches itself to flashing yellow, so no direction is left without a red. The normal cycle does not resume until the light is replaced.

What it looks like

A round module with a black body and a clear lens, with LEDs across the whole surface. The colour only shows when the light is on. When fitted, the module goes in the top slot of the signal head.

Technical data

- Ø200 mm diameter;

- 20 × 20 × 10 cm;
- 1 kg.

The other lights

For the same traffic light there is the yellow V11-D200-Y and the green V11-D200-G. For a control fault, see the V11-CONTROL control unit.
