|---|---|
| **Material (Mirror)** | Acrylic |
| **Material (Profile)** | PPC |
| **Diameter (Mirror)** | Ø80 cm |

## Description

The exit from a yard or an underground car park, a junction with a building on the corner, a tight bend: these are places where a driver cannot see what is coming from the side until the car is already in the road. The ATZ 6080 is a convex mirror 80 cm across that shows, in a single view, what is round the corner: cars, cyclists and pedestrians.

### Mirror and frame

The mirror surface is acrylic, a material that withstands knocks better than glass and is lighter. The frame is PPC plastic, orange with black sections, so the mirror is easy to spot. It measures 80 × 80 cm, is 10.6 cm deep and weighs 6 kg.

### Installation

Both fixing kits are in the box: one for a pole between Ø48 and Ø85 mm and one for a wall. Besides a separate pole, the mirror can go on a traffic light pole or on the pole of a pedestrian crossing sign.

### When to choose Ø80 cm

A larger diameter gives a larger image, which a driver reads faster and from further away. Ø80 cm suits public roads, junctions and exits onto busy streets. For yards, garages and car parks, where distances are short, the Ø60 cm ATZ 6460 mirror is enough.

### Where to put it

The mirror usually goes opposite the exit, on the other side of the road or driveway. Before fixing it for good, check from the driver's seat that both directions of traffic are visible in it.

The Ø60 cm version and the other models are in the traffic mirrors category.

### Cum se montează
How it is fitted

**ATZ 6080**

**Pe stâlp Ø48-85 mm**
On a Ø48-85 mm post

**Pe perete**
On a wall

Suportul se reglează sus-jos și stânga-dreapta, ca oglinda să arate exact zona de care ai nevoie.
The bracket adjusts up and down and left and right, so the mirror shows exactly the area you need.
