Technical specifications

Material	LDPE
Water Capacity	100 lt
Color	Red, White

Description

You carry it empty and fill it on site with 100 litres of water. Empty it weighs 10 kg, so you can move it on your own until it is in place; full, it stays put.

Shape

It measures 120 × 50 × 50 cm: long and wide, but low. It stands on two feet with an opening in the middle, and has a connector on the side for the next barrier.

Material and colours

It is made of LDPE, in red and white. Placed in a line with alternating colours, it makes a line that is easy to see from a distance.

Where it goes

- to close a lane or an entrance for several days;
- along the edge of a work area that vehicles must not enter;
- to mark out a temporary car park or an event area.

Compared with the ATE 12520-W

The ATE 12520-W weighs 20 kg straight out of the van and needs no water. The ATO 7700 is lighter to carry empty and much heavier once filled, so it suits closures that stay in place for days.
