| **Installation** | Lockable to the Next Piece |

## Description

When a power cable or a hose has to cross a lane, a site road or the entrance to an event hall, you do not leave it loose on the ground. You put it in a protector like this one, which people, trolleys and cars can cross.

### How it is made

The base is black vulcanised rubber with 2 channels of 3 × 3 cm. On top there is a hinged yellow PPC lid that you lift to lay the cables and close again. The yellow stands out clearly on asphalt and warns of the obstacle.

### Dimensions

- 100 cm long, 25 cm wide, 4.5 cm high;
- 8.5 kg;
- 2 channels of 3 × 3 cm;
- recommended crossing speed 10 km/h.

### More metres

The ends of each piece lock to the next one, so you can build a crossing as many metres long as you need.

### For more cables

If you have several cables to protect at once, the ATO 5855 has 5 channels of 3 × 3 cm.
