Technical specifications

Material	Steel pipe, plastic and reflective film.
Height (above ground)	70 cm
Color	Black
Reflective	Reflective Tape
Installation	Recessed

Description

The ATD 700-01 looks different from the other bollards: it has a glossy black hexagonal body with 3 reflective bands at the top, and inside, along its full length, a Ø48.3 mm steel tube that makes it rigid.

Material

The body is made of high-density polyethylene or polypropylene with additives against degradation. The colourant contains a pigment with high UV protection, so the bollard keeps its original gloss for a long time.

Installation by embedding

This bollard has no flange: it is set into concrete or asphalt. It is 100 cm long in total, of which 70 cm stays above ground, and at the base it has a locking fixing system for mounting in the ground.

Technical data

- 70 cm above ground, 100 cm in total;
- hexagonal body, 15 × 15 cm footprint;

- Ø48.3 mm steel tube;
- 3 kg.

Where it is used

In pedestrian areas, parks and car parks, wherever you want a decorative bollard fixed permanently with no visible bolts.

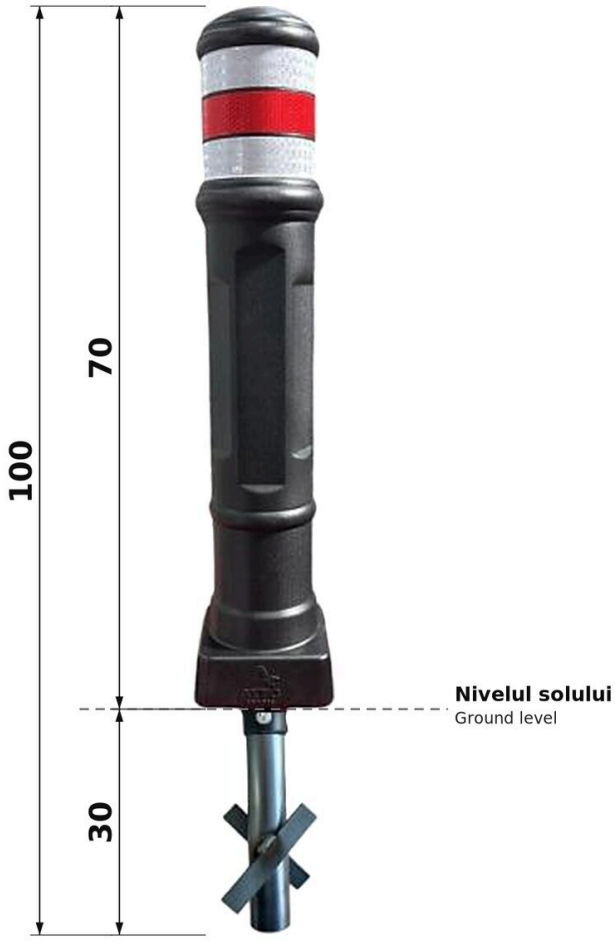

Flanged bollards

If you cannot make holes for embedding, choose a flanged steel bollard, for example the ATZ M7592-BK.
