Technical specifications

Material	Zinc-coated pipe
Wall Thickness	2 mm
Diameter	60 mm
Height	350 cm

Description

A large sign catches the wind like a sail. For one of those, or for two signs one above the other, a thicker post than the standard one is the safer choice. The ATT 60×2_3.5 is a Ø60 mm galvanised tube with a 2 mm wall, 350 cm long, with a plastic cap at the top to keep water out of the tube.

Technical data

- diameter: Ø60 mm, 2 mm wall;
- length: 350 cm;
- material: galvanised tube;
- plastic cap at the top;
- weight: 10 kg.

Why 350 cm

The extra length allows a deeper foundation or two signs one above the other on the same post, for example a sign with an additional panel below it.

Installation

The post is set into the ground in a concrete foundation. The sign is fixed with ATT 60c galvanised anti-rotation clamps, made for Ø60 mm: 2 clamps for a normal-size sign. The spare cap is the ATT 60d.

What goes on it

Road signs and traffic mirrors: the ATZ 6080 and ATZ 6460 come with a fixing for posts between Ø48 and Ø85 mm.

Where it is used

On public roads and streets, at junctions and in windy spots, for large signs or several signs on one post.

Other versions

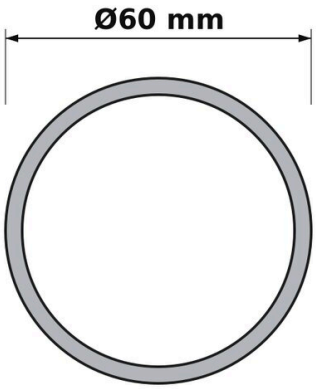

For ordinary signs, a Ø48 mm round post is enough; for bolt-down installation with no poured foundation, there is a Ø60 mm flanged post.
